Dear Joshua -

Many thanks for the slants, safely received. I would like also to have lyophilized cultures of the other amino-acid mutants, since demonstration of a clear-cut effect in adaptation may well depend on having a mutant with a specific requirement for an amino-acid not accumulated to any appreciable extent in the free amino-acid pool, about whose constitution in P. fluorescens I don't have any information yet.

I have a copy of Astor's monograph in Berkeley, and will ask Martha to mail it to you. You're welcome to keep it as long as you like. It wouldn't surprise me if Astor still has copies.

Best wishes to you both,

Roger
